Ashani Abacus

Ashani Abacus is set up by women entrepreneurs in order to develop the mathematical and brain skills of young children using the magic tool " abacus"

Ashani Abacus is a unit of "Anannya Educational Trust" which is an independent body registered in Odisha. Ashani Abacus has today more than twenty centres in Odisha. It is also proud to state that more than hundred students completed advanced level programmes in Abacus training with in a short span of time.

History of Abacus

- Abacus is an ancient Chinese tool
- Abacus is still widely used in place of calculator in China
- In each rod of Abacus, there are four beads below the beam and one bead above the beam
- Each bead below the rod has the value one (1) and each bead above the rod has the value five (5)

Why Abacus

By using abacus as a tool, the brain power is harnessed. Also there is over all brain development focussing on right brain.

- The human brain has two halves: the right and left
- The left brain is linear and logical. The right brain is intuitive

Beyond Abacus

Using abacus the functions of brain cells are optimized. The billions of neurons in the brain act in concert sending electrical-impulses, using all possible routes and switches. It gives focused and incisive mathematical abilities thus bringing about a sea-change in the personality and performance of the individual. There are countless benefits of the optimization of brain power.

Best Learning Age

According to analysis, the development and growth of the brain will begin from 4 to 6 years at a high speed; the progression will then slow down after 12 years when growth reaches 75%. In order to give equal reign to the overall intelligence of the cerebrum, both the right and left brain must be trained at the same time at the right age.

The course details

The course is divided in to eight terms

Each term has taught over three months

Each class is of one & half hours duration & two classes in a week

Total programme duration is about 24 months and does not clash with school curriculum

Who can join to benefit

Any children between 4 to 14 years of age can join programme

Elementary – 4-6 years

Regular – 7-14 years

Both the programmes are eight levels

All the levels are three months each

A whole brain development programme using "Abacus and Mental Arithmetic System" for children 4 to 14 years

A very successful Odisha Enterprise

Ashani Abacus is set up by women entrepreneurs in order to develop the mathematical and brain skills of young children using the magic tool " abacus"
